

BaaS

Brain as a Service

Today

- Computing capacity available on-demand, infinitely scalable
- Human capacity limited by the “job” paradigm
- Semi-smart systems like Siri and Google Now

Challenges

- Software cannot do everything
- Humans are too expensive
- Non-overlapping domains

Solutions

- Hybrid Intelligence
 - Machine + human intelligence = I^2
- Distributed, connected, real-time, 24/7 human computing service
- CPU + GPU + HPU

Future

- Human intelligence becomes a commodity for software applications
- Reduced time-to-market for complex solutions
- Employment lasts 5 seconds

Thank You!
